

What is the Project

The Village of Longview is completing a pre-development process for a community small-scale renewable (solar) generation project to be located on Village owned land that is accessible by highway, south facing exposure and adjacent to Fortis grid distribution system running along side property.

A community small scale renewable project

Eligible generating units

Utilize renewable or alternative energy

Directly connect to the distribution system

Sized to fit within distribution system limits

Export electricity to grid

Are passive electricity market participants (price takers)
